

BANK CUSTOMER ANALYSIS

Data-Driven Insights Report with Power BI Dashboard

Report Date: June 25, 2026

Dataset: 3,000 bank customers | Analysis: SQL + Python + Power BI

EXECUTIVE SUMMARY

Key Findings: The bank manages ■2.01 billion in customer deposits across 3,000 accounts, with highly concentrated value. The top 10 customers represent just 1.8% of the total, while 70.5% of customers carry unsustainable loan-to-income ratios (>2x), representing ■1.57 billion in repayment risk. The Jade loyalty tier anchors 43% of deposits; however, 26 high-income, low-deposit customers represent clear premium savings opportunity. The Power BI dashboard visualizes these segments, enabling rapid customer targeting and risk monitoring.

Key Metrics Overview

Metric	Value
Total Customers	3,000
Total Deposits	■ 2,014.7 Cr
Average Deposit per Customer	■ 6.72 Lakh
Customers with Loan Risk (>2x income)	2,114 (70.5%)
At-Risk Loan Exposure	■ 1,567.4 Cr
Premium Savings Targets	26 (0.9%)
Top 10 Customers' Deposit Share	1.8%
Jade Tier Deposit Share	43%

2. CUSTOMER SEGMENT INSIGHTS

2.1 PREMIUM SAVINGS TARGETS (High Income, Low Deposits)

Opportunity Size: 26 customers with estimated income >₹100,000 but deposits <₹20,000. Average income of this segment: ₹2,23,344. This represents untapped savings capacity. Recommendation: Direct personal banker outreach with premium savings account offers. Projected uplift: If each customer moves 20% of their income into deposits, expected deposit gain: ~₹11.6 crore.

2.2 LOAN REPAYMENT RISK (Critical Finding)

Risk Exposure: 2,114 customers (70.5%) carry loans exceeding 2× their estimated income. Total exposure: ₹1,567.4 crore. This is the highest-priority finding: a large majority of the customer base shows unsustainable debt levels relative to income. **Actions:** (1) Audit underwriting criteria to prevent future over-leveraging. (2) Segment this cohort by loan amount and income; target top 20% by absolute exposure with structured repayment plans. (3) Monitor monthly for first signs of default (missed payments, account inactivity). (4) Consider loan restructuring or consolidation offerings to reduce monthly burden.

2.3 LOYALTY TIER PERFORMANCE

Loyalty Tier	Customers	Deposits (₹ Cr)	Avg (₹ Lakh)	% Total
Jade	1,331	92.7	6.97	43.0%
Silver	767	50.5	6.58	23.6%
Gold	585	38.9	6.64	18.1%
Platinum	317	19.4	6.12	9.1%

Key Insight: Jade (the base tier) is the value anchor, not Platinum. Jade and Silver together drive 67% of deposits. **Strategy:** Invest in Jade retention and conversion to higher tiers with incentives (fee waivers, higher rates, personal banker access).

3. OCCUPATION & GEOGRAPHIC INSIGHTS

Top 5 Occupations by Deposit Value

Occupation	Deposits (■ Cr)	% Total
Structural Analysis Engineer	22.8	1.13%
Database Administrator III	20.6	1.02%
Social Worker	20.0	0.99%
Office Assistant III	19.4	0.96%
Systems Administrator II	18.0	0.89%

Insight: Deposit value is spread across 195 distinct occupations with no single occupation dominating. The top 5 account for only ~5% of deposits. Recommendation: Use occupation as secondary segmentation for marketing themes, but prioritize income and deposit history for product recommendations.

Geographic Distribution: Deposits by Nationality

Nationality	Deposits (■ Cr)	% Total
European	87.4	43.4%
Asian	51.5	25.6%
American	33.5	16.6%
Australian	16.9	8.4%
African	12.1	6.0%

Critical Finding: European customers account for 43% of total deposits—a concentration risk.
Recommendations: (1) Develop dedicated relationship team for European segment. (2) Diversify growth toward Asian (25.6%) and American (16.6%) segments. (3) Offer localized products (currency accounts, investment partnerships).

4. POWER BI DASHBOARD OVERVIEW

The Power BI template includes 14 interactive visuals connected to your customer data model, enabling real-time slicing and filtering by occupation, loyalty tier, location, and nationality. Key dashboard visuals include:

1. Customer Deposit Rankings & Top Performers
2. Loan Risk Segmentation by Income-to-Loan Ratio
3. Loyalty Tier Value Contribution & Segment Performance
4. Premium Savings Opportunity Identification
5. Occupation-Based Deposit Value Analysis
6. Geographic Deposit Distribution by Location & Nationality
7. Cross-Sell Pipeline: High-Deposit Customer Credit Card Status
8. Customer Relationship Heat Map: Income vs. Deposit Balance

How to Use:

Connect the Power BI template to your Banking.csv dataset. Use slicers to filter by location, occupation, or loyalty tier. Drill into individual customer details for relationship management. Monitor the risk dashboard weekly to flag new customers entering the >2x loan-to-income category. Share 'New Risk Alerts' report with credit and relationship management teams.

5. RECOMMENDATIONS & ACTION PLAN

Priority 1: Address Loan Risk (Immediate - 1-2 Weeks)

Audit the 2,114 high-risk customers (loan > 2x income). Create risk tiers: Red (>3x income), Yellow (2-3x). Assign relationship managers for Red tier. Expected outcome: Prevent defaults, improve retention.

Priority 2: Premium Savings Campaign (Immediate - 2-4 Weeks)

Reach out to 26 high-income, low-deposit customers via dedicated relationship manager. Offer premium savings accounts with higher rates and wealth management services. Expected outcome: ■10-15 crore deposit uplift.

Priority 3: Loyalty Tier Optimization (Mid-Term - 1-2 Months)

Review Platinum criteria; audit vs. peers. Launch Jade-to-Silver and Silver-to-Gold progression programs with incentives. Expected outcome: Higher engagement, increased cross-sell, improved retention.

Priority 4: Geographic Diversification (Ongoing)

Assign dedicated relationship manager for top 20 European customers. Develop European-specific products. Expand Asian and American presence with targeted hiring and localized offerings.

Priority 5: Credit Card Cross-Sell (Ongoing)

Focus on mid-balance customers (■5-50 lakh deposits) and limit/usage upselling. Launch targeted campaigns. Expected outcome: ■50+ crore credit card balance uplift.

6. LIMITATIONS & NEXT STEPS

Limitations of This Analysis

- Single point-in-time snapshot; no trend analysis across months/years.
- Loan risk threshold ($>2\times$ income) is analytical assumption, not verified policy.
- Location ID is granular (2,890 unique values); lacks branch/region mapping.
- Estimated Income is self-reported; may not reflect verified, taxable income.
- No transaction-level data; cannot assess payment behavior or seasonality.

Recommended Next Steps

- **Cohort Tracking:** Monitor the 26 premium targets over 3-6 months post-outreach. Measure conversion to premium savings.
- **Default Prediction:** Build model to identify highest-risk customers within the 2,114. Use payment lateness and account inactivity.
- **Product Affinity:** Analyze which customer types adopt new products. Use for targeted launches.
- **Churn Risk Model:** Identify customers at risk of leaving. Develop targeted retention offers.
- **Profitability Analysis:** Calculate lifetime value (LTV) for each segment. Allocate resources accordingly.
